

TREATMENT DAY

What to expect, start to finish

1 Inspect and measure

We confirm where termites are active and measure the foundation.

2 A small, neat trench

Narrow and shallow. We drill only where concrete meets the house.

3 Apply and restore

Termidor HE goes in, the soil goes back and drill holes are patched.

4 Document and follow up

You get a written record of what was treated, plus follow-up.

Good to know

The treatment goes in the soil around your foundation, not across your living space. Every application follows the EPA-registered label and state regulations.

A locally owned pest solutions company serving the Kansas City metro.

MEET THE OWNER

Joe Cusic

30+ years in the field. The person who answers the phone is the person who shows up.

- ✓ Licensed applicator, MO and KS
- ✓ You deal directly with the owner
- ✓ No mandatory contracts
- ✓ Veteran and senior discounts

Termidor is a registered trademark of BASF. Always read and follow label directions. Product comparisons are BASF figures for Termidor HE versus conventional liquid termiticide treatment.

TERMITE TREATMENT

LESS DIGGING. SAME PROVEN PROTECTION.

Smaller trenches, fewer drill holes and less disruption to your property.

ACCREDITED TERMIDOR HE APPLICATOR

HOW IT WORKS

Termites never see it coming

Termidor HE is a non-repellent termiticide.

Termites can't smell it, taste it or avoid it, so they tunnel straight through the treated soil around your foundation.

1 They contact it

Foraging termites pass through the treated zone without knowing it.

2 They share it

Through normal contact and grooming they pass it to nestmates. BASF calls this the Transfer Effect.

3 The colony goes down

BASF reports 100% control of termites in three months or less.

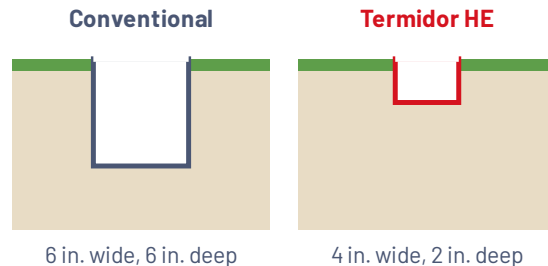

What does HE mean?

High-Efficiency. It is the same Termidor active ingredient, engineered to spread more evenly through the soil. That is why a complete treated zone takes less water and less digging.

LESS INVASIVE, BY THE NUMBERS

A smaller footprint on your property

Trench at the foundation

Drill holes in concrete

Half

the water: about 2 gallons per 10 feet instead of 4

1 ton

less soil dug up on a home with 200 feet of foundation

BASF figures for Termidor HE compared with conventional liquid termite treatment. Actual trenching and drilling depend on your home's construction.

WHAT IT MEANS FOR YOU

Full-strength protection, lighter touch

- ✓ Flower beds, mulch and sod along the foundation see far less disturbance.
- ✓ Fewer holes in your patio, porch, garage floor and driveway.
- ✓ Less time with equipment and hoses at your home.
- ✓ Applied by a licensed, accredited applicator with 30+ years of termite experience.

5-Year Service Warranty

If live termites return to the treated structure within five years, we re-treat at no charge. Transfers to a new owner if you sell. Covers re-treatment, not repair of termite damage. Ask us for the full written terms.
